
Pacific Rehab Foundation

Help us provide equipment for those most in need

Pacific Rehab Foundation provides on the ground training, support and education for the local wheelchair technicians in complex fitting and provision as well as follow up care and maintenance in order to provide best outcomes. We also work with therapists and care workers to identify clients specific needs and local accessibility issues which are often complex.

All product provided to Fiji is 100% donated.

Your donations can change lives

In our privileged societies we have a dearth of equipment sitting around and not helping people.

Whether that is as used complex equipment that can be reconditioned, Trial and Demo product that has been depreciated, or superseded by newer models.

With the funding available in NZ there is no second hand market, nor is dropping discounted product into a small market good business sense.

It is this product we can apply our learned skills to, and create world class results for people only used to very basic outcomes.

By donating the specialised product to Pacific Rehab Foundation we can reach aspirational persons with a disability allowing them to reach out into their community and play a role in helping others and becoming an inspiration to others.

We work directly with the Spinal Injuries Association in Fiji, who are responsible for identifying those who would most benefit from specialised equipment.

How to donate

As part of your end of financial year processes you can write off any of your unwanted demo or sample equipment and provide it direct to Pacific Rehab Foundation for shipping to those who urgently need this in Fiji.

Alternatively you can charge it directly to the Spinal Injury Association of Fiji at no cost and liaise with Pacific Rehab Foundation in regards to shipping.

Whilst Pacific Rehab Foundation is a NZ registered charity, we do not have donee status within NZ as all our work is conducted in the Pacific.
